

The Green Chemistry Classroom: Modeling Environmental Sustainability Through Safer Labs

Wednesday, November 17, 2021

4-5pm | via Zoom

Register at: <https://bit.ly/edTrends11-17-21>

Join **NYS Master Teachers** to discuss how they have “greened” their chemistry classroom. How? In collaboration with **Beyond Benign**, a national organization devoted to sustainability in the chemistry classroom, NYS Master Teachers have redesigned traditional chemistry labs lesson plans to reduce and/or eliminate the use or generation of hazardous substances while remaining NYS Science Learning Standards-(NYSSLS)-aligned. Using sustainability as a framework, these teachers highlight New York State industries that practice green chemistry in their classrooms. The teachers will share direct lesson plans and labs, from **conducting a green inventory** to **removing harmful chemicals**. Engage your students in the science of solutions guided by an interdisciplinary approach to environmental sustainability.
